

## FREQUENTLY ASKED QUESTIONS

1. Why are there driveways wider than 6m on my street:

The current driveway policy allows for a maximum of 6m at the curb. Many driveways were constructed prior to this policy so those driveways were exempt.

2. Can my driveway be right at the edge of my property?

Yes, your driveway can be adjacent to your property line. Owner is responsible for ensuring accurate property line. Failure could result in cost of restoration.

3. Can my driveway be beside my neighbour's driveway?

Yes, there are many adjoined driveways throughout the City.

4. Can I put my driveway on an easement?

Yes you can. However, be aware that utility companies have the right to perform work in these easements which could result in a disturbance to your driveway. However, restoration cost is the responsibility of the utility company.

5. Can I flare out my driveway in front of my neighbour's property?

If the street has curb and gutter, then no. However, on a street with no curb and gutter, a flare to match the edge of pavement may end up slightly in front of the neighbouring property.

6. Why can't I flare out my driveway exceeding the 6m?

If a street has curb and gutter, the city does not allow more than 6m at the curb. This distance was decided taking lot sizes, parking and snow storage into consideration.

7. Can I build my own driveway?

Yes, as long as you complete and sign the Hold Harmless and Indemnification Agreement and submit proof of your valid insurance policy with \$2M liability coverage.
